

THE EQUALIZER VENTILATION SYSTEM

A makeup air system used in conjunction with a mechanical exhaust, such as whole house fans, bathroom fans, or for any place the barometric pressure needs to be balanced.

POP VENTILATOR

- Special electrostatically charged filter pulls particulates and water molecules from the air
- Specially designed filter will never clog, so that make up air will never be cut off, thus ensuring a balanced home or building
- This hypoallergenic air makeup system prevents rain or snow from entering
- Filtered air inlet is beneficial for those who suffer from airborne allergies such as asthma. This is done by catching airborne contaminants at their source
- As recommended by HUD, "all mechanical systems must have adequately sized inlets for an adequately sized exhaust to release any unbalanced pressure" (Federal Register 2005)

Celing vent with filter

Close-up of filter. Can be changed easily.
